12. Which aspects of the course were most valuable?
The textbook problems
The hands on examples and visuals were most valuable to me. This made the material much more easier to understand and learn.
I really liked lab and when we could physically explore the physics concepts.
I see the laboratory projects as the most valuable part of this course. The hands on learning and visual demonstrations/models help you not only understand the material but also see it visually which can deepen understanding.
The demonstrations and questions that were asked throughout the lecture made the course work easier to process.
Attending the course without missing any classes would be the most beneficial because the instructor goes over possible important information relative to the exam.
One of the aspects that were most valuable from this course was that the professor was very caring to his students. Even though students would miss homework assignments, labs, or quizzes, the professor gives another chance for the student to turn in. Even if you have questions, the professor has office hours and if you can't make it to his hours, you can ask the professor to make an appointment for a different day.
Examples, demonstrations were really cool! Class assignments were helpful for studying. Professor's passion and openness, willingness to communicate, to help us learn, and not take it seriously when we don't know something. I mean we are just students, we don't know physics, we are learning. Thank You for all your hard work! I felt the big amount of work the professor did to help us. Buddhi Rai is my recommendation for the professor of the year at Maui College, and I truly mean that.
Demonstrations

13. State in two or three sentences how this course could be improved.
The instructor seems frustrated by questions when he thinks we should already know. He does not explain much theory, just goes over problem solving. He often does not finish a problem and then moves on to another one.
sometimes the lecture notes feel a bit disorganized, and I felt overwhelmed since we hadn't learned all the calculus concepts before needing them (but that's not prof. fault!) Just found it stressful.
I believe that the way the grade book works could be revised. Exams 1-3 are worth 15% combined whereas the final exam is worth 25%. I do not think that the final exam should be worth 10% more than the other 3 exams leading up to it combined.
I would prefer for the whole class to be in person. Also, this may be just the way college classes work, but they are really long and my attention span is rather short, so I tend to zone out sometimes during lectures.
On some class assignments it would help to have an answer key on the document to check if we got the answer in the right direction. (Similar to the Chapter 16 classwork where it had the "correct answer" but some questions did not have the right answer, but if the student knows how to solve the problems, the student would have recognized if the answer is wrong).
On exam day, I really appreciate you going over what the exam would possibly have (Pre-Exam Review), definitely refreshed my brain and I did better on the exams.
I would say that this class was very difficult for me. I felt like this class was very fast-paced. I do hope that maybe the professor will slow down a little bit and after going through another topic, maybe ask the students if they understood the topic so far. I also felt that when it comes down to upcoming exams, it feels a little bit crammed because the professor would tend to add another topic before the exam.
I felt the class was a little bit disorganized. Eg. for labs I would have to wait for Tuesday (day before Wednesday to print the papers). But also otherwise, eg. when I go to "Modules" in Lualaba I cannot open all of them in different tabs to skim through the material and find what I want to study. I need to open one by one, and go back, open again... This system doesn't work the best for my studying. Also, the file names are different for each week and they have weird names eg. "week06-phys170-f2020-classwork-part1-ch5-part1" - why not just name this "Classwork"? Its already listed in week 5, so I know its week 5, if it's just a simple name makes it easier for me to study. Then there could be "Classwork", "Presentation", "Homework", "Textbook" etc. for every week. So it wasn't as organized as I would ideally like and it made me feel confused what to study because there are so many different things. I would definitely change the way Modules look like, and that would improve the course, make it more organized.

14. Other comments:
Teacher is nice, but when the class average for an exam is 50%, the teacher needs to modify the way he is teaching. Telling us it's okay to sleep only 4 hours is unreasonable and not the correct solution. We can learn physics without killing ourselves.
I wish Prof was a bit more confident. He is very knowledgeable and has a wonderful and sweet fascination with physics. I think if he were more confident in himself and saw how truly brilliant he is, he might be able to connect with the less knowledgeable students. It sometimes felt that Prof thought we (the students) should know something just because he did (even though he is much more informed.) Sorry if that didn't make sense...
Professor Buddhi's enthusiasm and willingness to help students made this course, which contains difficult material, bearable :) .
Thanks for teaching me physics! It's really fun, despite not understanding the concepts sometimes.
Keep doing what you are doing, this is probably the most interactive in person (Hybrid) class since I had back in 2019. I definitely learned more compared to taking an asynchronous class. But if I were to imagine taking PHYS 170 as an asynchronous class, I would not imagine myself understanding any concepts without visual representation.
If I know the amount of questions. Say 50 questions every week. Then that'd be helpful, make it easier to study. And then know where they are listed, eg. in one document. The way it was set up I don't know the amount of questions, there are so many different questions and I have to figure out how to solve them - what if I don't know how to solve the question. Where do I ask? If I ask the professor the professor might think I don't know. So if it was more organized so I don't have to ask, or can look for answer in Lualaba. The biggest challenge in this class was going through questions we don't know and didn't work in class.
