ICES Open-Ended Items

What are the major strengths of the instructor/course?

- Having to do the pre-lab work on my own really made me think about these concepts in depth. I also feel that I got good practice writing a lab-report.
- The Instructor was good at helping with questions or helping find answers if he wasn't sure. The course was fun and I definitely learned a lot doing the work for the reports.
- He was prepared for class and very open to questions.
- Please refer to the review of Justin if you can. In summary Buddhi is great; he knows his theory and tries to be helpful more than any other TA I've met. I loathed when Chris entered the room, because he was the anti-particle of helpfulness.

What do you suggest to improve the course?

- Please make the "methods and apparatus" section of the lab manual more specific. Also, I think everyone in the class was

really frustrated by the final lab (the rutherford experiment). Provide more help for writing this particular lab report. Also...sometimes the quizzes were online (in e-learning) and sometimes they were in class. Either option is fine, but it would have been better if it were consistent.

- A little more information in the lab manual or at least some good places to look at for info. I like the set up but just a bit more help on some of the more complicated ones would be nice.
- The grading needs some improvement. The rubric used is very vague, which is fine, but then there were often very few comments written on the graded lab reports. A little more description would be helpful so we could more clearly see what we need to fix in future reports. Also, some of the diagrams in the lab manual didn't match the apparatus very well, which made the labs more confusing than they needed to be.
- Better equipment and better lab manuals. I appreciate the education in burdening the student to do research and develop an experimental protocol, but don't appreciate the hazy and often incorrect descriptions of the apparatuses in the experiments that are presented in the lab manual.

Please comment on the grading procedures in the course.

- Each student should be given a copy of the grading rubric for lab reports at the very beginning of the class, so students know what to strive for before writing their first lab report.
- The grading was reasonably fair, but could have used more explanation.
- Buddhi was pretty fair, although sometimes his grading priorities were vague. I appreciated that he emphasized an education in proper data treatment and presentation over experimental results. I would take a class with Buddhi if he taught one; he is very helpful and does his best to expound upon theory when asked.
